All other miscellaneous services performed at a rate of \$75.00/hour

TESTIMONIALS:

"Ryan has tinted and detailed our cars for probably 20 years now. This last visit was the same as the first. Extremely professional with awesome service. We appreciate the continued level of excellence we receive every time from the Auto Spa."

— **KELLEY SMITH**

"They did an outstanding job detailing my car! Highly recommended!!"

— **ZACHARY LLOYD**

PRIME™ XR PLUS

PRIME™ XR

PRIME™ CS

Offering 98% infrared heat rejection thanks to multi-layer nano-particle technology, PRIME XR PLUS automotive window tint combines a cool look with extreme performance. Let PRIME XR PLUS keep you comfortable and protected no matter the weather.

Utilizing a nano-ceramic construction, PRIME XR maintains the same flawless appearance and clarity throughout the years. Blocking up to 88% infrared heat rejection, PRIME XR will provide you with the level of performance you expect from a top-of-the-line automotive window tint without breaking the bank.

Protect yourself from 99% harmful cancer causing UV rays & achieve the privacy you desire with PRIME CS, the most color stable window tint film around.

BENEFITS OF WINDOW FILMS:

- **Ceramic and non-metal**, nano-hybrid carbon technology
- **Non-reflective**, "black" finish that will not fade
- **Exceptional heat and infrared rejection**
- **Blocks 99% of harmful UV rays** to help protect vehicle occupants as well as the interior
- **No signal interference**
- **Manufacturer's lifetime limited warranty** with protection against film fading

XPEL Paint Protection Kits provide durable paint protection from frontal attacks of rocks, abrasions, bug acids, weathering and will NOT harm your paint. Major auto manufacturers endorse them and they help maintain your vehicle's value without altering its appearance or aerodynamics. The films are optically clear, scratch resistant and will not crack, yellow, shrink or peel.

"Perhaps the best product you have never seen..."

- Motor Trend Magazine

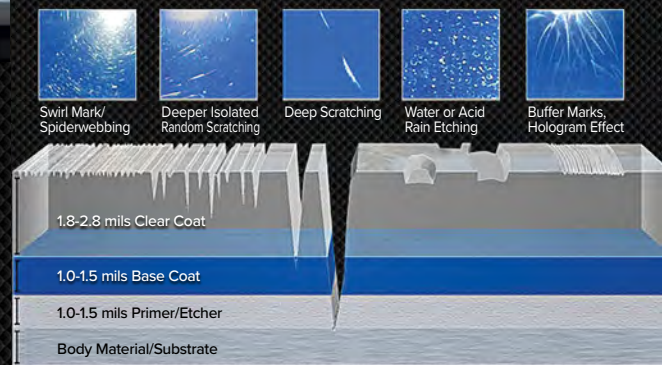

Ceramic coatings are the most recent advancement in paint and surface protection.

SIGNATURE FEATURES:

- **PROVIDES PROTECTION FROM THE ELEMENTS**
Formulated to protect against damaging UV rays, oxidation, insect acids, corrosion, and contaminants.
- **REPELS WATER, DIRT & ROAD GRIME**
Provides hydrophobic and self-cleaning properties.
- **RESISTS STAINS & CHEMICAL ETCHING**
Prevents discoloration from oils, pollutants, and other environmental impurities.
- **IMPROVES SURFACE CLARITY**
Increases color depth, leaving paint or PPF with a smooth and slick finish.

Paint Correction, also known as swirl mark removal or machine polishing, is the fine art of delicately removing micro-scratches and swirls through machine polishing/buffing. When done properly, a very fine amount of clear coat is removed along with the otherwise permanent scratches and swirls in the clear coat. It could be likened to ultra-fine sanding but when we talk about microscopic we are referring to a few microns (a micron is 1/1000th of a millimeter). This leaves crystal clarity, pure reflections, amazing gloss and slickness. When performed by a skilled craftsman, the difference cannot be fully captured in photos. It must be seen in person to believe.

This diagram illustrates the typical make up of modern car paint where the topmost clear coat layer contains a number of marks or scratches.

A combination of cleansers and polishes of various grades are applied to a car's paint using specifically designed buffing pads (there are many grades and types available) and either rotary or dual action polishers. Each stage is meticulously controlled and vigorously inspected using specialized lamps and tools. As you can probably tell, to be able to do the job properly requires the ability to judge the existing condition of your car's paint and foresee likely issues before starting work. **This requires not only the use of the right equipment, but also years of experience and an understanding of the many different paint systems used on cars.**
